

# amfAR Secures Critical Research & Streamlines IT with IPM

## How Intelligent Protection Management Helped amfAR

In just a few months, IPM transformed amfAR's IT operations, enhancing security, improving efficiency, and enabling long-term scalability.

### Strengthened Data Security

Protecting sensitive research from cyber threats

### Optimized IT Efficiency

Reducing internal IT workload and operational costs

### Scalable Cloud Infrastructure

Future-proofing technology to support growing research

## The Challenge

amfAR, The Foundation for AIDS Research, relied on an aging IT infrastructure that was becoming **costly, inefficient, and vulnerable to security risks**. Managing their own data security and IT environment **strained internal resources**, pulling focus from critical research initiatives.

To continue their mission, amfAR needed a **more secure, reliable, and scalable** IT solution.

## The Solution

IPM implemented a **Dedicated Private Cloud Infrastructure**, equipping amfAR with:

- **Advanced Security & Compliance** – 24/7 threat monitoring, rapid response, and data protection
- **Fully Managed IT Services** – Reducing workload for internal teams, allowing focus on research
- **Scalable & Future-Ready Cloud** – Supporting growth without costly hardware investments

## The Results

• **Enhanced Security & Compliance** – Critical research data is now protected against cyber threats and system failures.

• **Reduced IT Burden** – amfAR's team can focus on their mission instead of managing IT infrastructure.

• **Scalability for the Future** – Flexible cloud infrastructure supports evolving research needs without disruptions or major capital expenses.

## Secure & Scale Your IT with IPM

Discover how IPM's cutting-edge technology solutions can drive security, efficiency, and long-term success for your business.
